

Removing the disharmony from Victoria's *Land Title Registration* system

• MM Park (Paper delivered at *Land Surveying Commission* Seminar, Bulleen, 21 May 2009)

ABSTRACT: the author considers those improvements to the Victorian Torrens system desirable to assist in bringing about an Australian harmonised (or even a uniform) system of land title registration.

KEYWORDS: Torrens – uniform – harmonised laws – real property – land title registration – electronic conveyancing – electronic register – complete – comprehensive – cost saving – adverse possession – boundary location errors – discrepancies – land parcel remnants – slivers – unity of parent and acquired land parcels – Mother Hubbard clause – compulsory participation in Torrens scheme – fundamental principle – overriding interests – off-register interests

Removing the disharmony from Victoria's Land Title Registration system

by Malcolm Park

OVERVIEW -

 - B. What is Unification / harmonization?
 - C. Why Unification / harmonization?
 - D. Compromises necessary to achieve Unification or Harmonisation.
 - E. Why Victoria should compromise to fall in with (say) Queensland.
 - F. What is wrong with the current Victorian scheme (this explains E above).
 - G. The fundamental principle of land title registration.
-

Among the projects being undertaken by the Victorian Land Registry is the harmonisation of differences of the registered land statutes between the various states and territories which together total eight different schemes.

In addition, the federal Parliament is considering harmonising an even wider range of statutes. Harmonisation in this context means removing inconsistencies. Absolute harmonisation would see a single nationwide law while a lesser degree of harmonisation would see compatibilities between different jurisdictions.

In the past there have been numerous calls for the introduction of a uniform registered land title scheme within Australia.¹ It may be that harmonising the different schemes can succeed where uniform law proposals have failed. Further, the success of harmonisation may

encourage and facilitate the take up of further harmonised laws (or uniform laws). Even without uniform laws, the benefits of the harmonised laws, such as cost savings associated with similar and simpler business models, are made available to all.

What is harmonisation?

Harmonising encompasses a degree of compatibility and commonality (or uniformity) of law across the state and territory borders. At one extreme “harmonisation” means a single national uniform law (with a single national consistent interpretation of that law) and at the other it means different but coherent laws throughout the land. For example, the statute of limitations for land ranges between 12 and 15 years. A uniform law requires standardisation while differing periods may be compatible with harmonisation; that is, harmonisation does not necessarily require a uniform limitation period across all jurisdictions.

Another example is the different ways that the indefeasible title of the volunteer is treated – I suggest that in this instance uniformity is desirable for harmonisation. Thus where two of the states have legislated to confer the protection of indefeasibility on the volunteer and two other states, pursuant to the interpretation by their courts, have also conferred this protection, the time may be opportune for those jurisdictions not recognising the protection to change their approach.

In general, harmonising seeks similarity without absolute uniformity.

It must be emphasised that the current Victorian and federal exercises are not necessarily a cobbling together of a system made up of “spare parts” representing the supposed best features of the various systems. A fresh design is not impermissible. Both substantive and procedural law must be considered. Uniformity of substantive law and consistency in its interpretation would be one extreme of harmonisation while a lesser degree of harmonisation may only require a similarity of procedural law throughout the different jurisdictions.

Why harmonisation?

The desirability of uniformity of law has increased with community mobility and the emergence of nationwide businesses unconstrained by jurisdictional borders.

With some exceptions, the financial institutions facilitating land transactions are no longer confined to their state of origin – they are national (and international) business entities.

Similarly, their customer base includes multi-state (or national and international) corporate clients with nationwide interests. Their client base may also include individual persons whose property holdings (perhaps for investment or leisure) extend beyond a single jurisdiction.

There are those who argue that the states are a relic of our colonial origins and anything more than a national government and local municipal governments are a waste of duplicated resources.

I can remember when an interstate trip or holiday was a talking point – today it's commonplace and we even have daily inter-capital commuters.

The rationale supporting uniformity or harmony is founded on perceived cost savings. In 2001 annual cost savings to NSW and Victoria of \$150 million were estimated with regard to the use of a common national e-conveyancing system being developed by Victoria. With regard to banking, the ANZ Bank's submission to the 2006 Federal Parliamentary House Standing Committee on Legal and Constitutional Affairs referred to an expenditure of \$50m by that bank in setting up separate facilities in New Zealand necessitated by the different legal requirements in that jurisdiction. Similarly, Davies et al (2001) have estimated the cost savings to be unlocked by introducing a uniform Australian-New Zealand Torrens system of land title registration.² The simplification of the different legal regimes would foster the growth of competition and the expansion of business to the benefit of all the jurisdictions. With regard to the Australian legal profession "... the largest nine national law firms are wasting as much as \$13.5 million per year in unnecessary duplication with additional millions being spent by dozens more multi-state firms forced to comply with the minutiae of state differences in professional rules with additional millions being spent by dozens more multi-state law firms."³ That is an average of \$1.5 m each for these nine largest firms.

Specific issues [or, what is wrong with the current Victorian system ?]

I suggest the issues needing consideration are:

1. Land parcel boundary location problems

The current means of resolving boundary problems in Australia range from part parcel adverse possession, building improvement or encroachment statutes, refusal to countenance the problem to a combination of these.

There are three factors in the current Victorian regime that are disadvantageous to the orderly maintenance of the land register.

First: the uncertainty associated with adverse possession in Victoria where title is extinguished and acquired unbeknown to the major affected parties: the registrar, the dispossessed registered proprietor (who has lost ‘title’) and the new unregistered title-holder who has acquired title through longstanding trespass. There is no ‘ceremony’, no nothing to mark the change of ownership because it is by operation of law. The Statute of Limitations usually requires that special defences be pleaded. Imagine that the lot is heavily polluted and the cleanup cost exceeds the land value. The trespasser is going to disclaim adverse possession – should the law allow someone to blow hot and cold? [If I owe a debt, I can always elect to pay it even though not legally obligated]. Thus, land is one of the few commodities where ownership is at the whim of the owner. By operation of law, by the passage of time, title is extinguished and is vested in the trespasser. Yet, after time has passed and title vested in the trespasser that trespasser can deny title. Where is the certainty we expect of property law?

Secondly: an added complication of Victorian part parcel adverse possession is the practice of creating a new parcel of land for that part parcel that has been acquired through adverse possession. Thus the adverse occupier’s land holding now consists of two registered land title parcels: the original “parent” holding and the newly acquired boundary sliver. Where once there were two registered title land parcels there are now three.

An alternative to the creation of these new land parcels is the amending of the trespasser’s “parent” register entry to include the additional sliver instead of creating a new land parcel, such as is done with acquired boundary slivers under the building encroachment statutes.⁴

Thirdly: another complexity is the direct consequence of creating a new parcel of land out of the boundary land sliver acquired through part parcel adverse possession. This is the presumption that a vendor (or transferor) only intends to transfer to the purchaser (or transferee) the parent parcel of which the vendor is the registered proprietor.

Victorian registry practice is to not recognise the “unity” of the adverse occupier’s two parcels making up the occupier’s total land holding. As a result, unless the occupier, as transferor, explicitly transfers the whole land holding (both parcels), the transferee will only

be registered as proprietor of the original (or “parent”) parcel of the occupier without the accompanying parcel of the acquired boundary strip.⁵ In Victoria, the presumption is that the transferor only intended to transfer the original parcel unless the transfer instrument includes a “Mother Hubbard” clause expressly including the additional boundary sliver in the transfer. As a consequence, the Victorian cadastre is replete with thin slivers of land where the registered proprietor is a past vendor who has transferred their land holding to a transferee with neither vendor nor purchaser realising that not all of the vendor’s holding has been transferred to the purchaser. And the past vendor, still registered proprietor of the thin sliver, may have retired to the Gold Coast or Spain or wherever.

My conclusion – see my 2003 thesis⁶ - is that Victoria should retain whole parcel adverse possession (for abandoned land), dispense with part parcel adverse possession and replace it with building encroachments as in (say) NSW and Queensland (for boundary location discrepancies). I concede that the retention of whole parcel adverse possession leaves some of the existing problems untouched.

Consequently – by alteration of the Victorian practice and presumption regarding these thin boundary slivers of land or adopting building encroachment legislation – the thin sliver is added to the parent parcel by amending the description of the parent parcel. Otherwise, it is possible that there may be, say, two million land holdings in Victoria with four or six million registered title parcels if each land holding is made up of two or more registered parcels.

2. The volunteer under the various systems

[not covered in seminar - *limited relevance to survey profession*]

Victoria currently confers immediate indefeasibility on the bona fide purchaser for value pursuant to the interpretation of the Victorian Torrens statute by Justice Adam in 1958.⁷ The majority of the other jurisdictions afford the same protection to the volunteer as to the purchaser (either by express legislation or judicial decision). The Victorian and Tasmanian law reform bodies have recommended that their respective states enlarge the protection of indefeasibility to include the volunteer, but these recommendations have not been followed through.

3. The elimination of the certificate of title issued to the registered proprietor (and the misuse of those certificates leading to informal unrecorded transactions including unregistered mortgages)

[not covered in seminar - *limited relevance to survey profession*]

In days past when the register was paper-based, the register entry was described as the title certificate, with the document issued to the proprietor being described as the “duplicate” title certificate. With the current electronic registers, the register entry is digital data and where there is a paper document issued to the proprietor, it is described as the title certificate. Queensland no longer issues certificates to proprietors on the basis that such certificates facilitate fraud by permitting the fraudster with custody of a certificate to falsely represent themselves as authorised to enter into transactions involving the registered land parcel.

4. The need to introduce in Victoria identity checks sufficient to prevent a Victorian clerk falsely asserting they had witnessed a proprietor executing a mortgage document, thus permitting a fraudster to defraud the proprietor

[not covered in seminar - *limited relevance to survey profession*]

In Queensland, witnesses must satisfy themselves as to the identity of persons executing documents in their presence.⁸ The importance of a strict identity check of the proposed transferor is heightened with the adoption of the electronic register and the availability of electronic conveyancing over the internet without face-to-face encounters.

5. The need to expand the group of persons entitled to make application to the registrar

[not covered in seminar - *limited relevance to survey profession*]

This suggestion is a direct consequence of a submission to the 1998 Victorian Parliamentary Law Reform Committee describing the difficulties faced by the dispossessed proprietor of a part parcel.⁹ Thus, any person able to demonstrate to the registrar an interest in making an application should be permitted to do so.

6. A requirement that applications be processed in order to get on title

Victoria, Western Australia and Queensland recognise legal title not recorded in the register, allowing title to pass (extinguishing the title of the registered proprietor and conferring title on

the trespasser) on the expiry of time alone. This creates an uncertain state of affairs. I am of the view that acquisition of title is not complete until an application is made to the Registrar and it is granted. This is related to my next point of compulsory participation in the title registration system.

7. Compulsory participation in the scheme

Compulsion assists the maintenance of the register and its integrity.¹⁰ This carries with it the consequence that all private interests are to be shown on title – if it is not shown on title it does not exist. All private rights or restrictions over a particular land parcel to the benefit of an individual legal person must be shown on the register and failure to register such a right or restriction may lead to the loss of that right or restriction. However, there will be many “off register” or “below register” rights or restrictions imposed by statute over all land holdings that are not shown on the register. In these cases the register records key private rights and restrictions, such as ownership, mortgages and easements etc., which together with the spatial cadastre provide an infrastructure on which all other “below register” interests can be referenced. Compulsion would force landholders to amalgamate their holdings, to apply to the Registrar to have their land registered in their name.

Conclusion

One problem is cost. The government demands a fee to allow land holders to regularize their position by applying to regularize their acquired title or to amalgamate their holdings. In the interests of a properly maintained register the fee should be waived. Another way is – and I hesitate to give voice to it because I don’t wish to give the government ideas. Are there any people from the government here today? Because there is an extra land parcel, albeit a thin boundary sliver, the government could encourage amalgamation by levying land tax on that sliver. After all, it’s only the first land parcel, the landholder’s residence that is exempt from land tax. That would see a lot of applications to amalgamate and thus regularize their holdings and, need I say it, maintain the register.

The fundamental principle of land title registration

Let me begin with this description of the fundamental principle of land title registration by quoting an English commentator from early last century:

A partial register is rather like a boat with a leak in it. You may not be drowned but you are sure to be uncomfortable. The register must be final and conclusive in all cases and for all purposes, or its utility is diminished as a practical alternative to the present system of conveyancing with its high technicality and mystic jargon, a cardinal defect of which is that the meaning being hidden from babes is revealed by the wise and prudent – for a fee.¹¹

The ideal espoused by the originators of land title registration was that of a complete and comprehensive central public register, administered by a centralised public authority and available for public inspection so that community confidence could repose in the register and its integrity.¹² The purpose of the register is that to investigate and ascertain the legal rights or obligations associated with any particular land parcel or lot, one need only inspect the register. Such an investigator “need not and indeed, must not concern themselves”¹³ with interests not disclosed on the register. An alternative formulation is that provided in an authoritative and detailed comparative study of international land title registration schemes: “title is not affected by anything not shown on the register. It is not only unnecessary but also impossible to establish a right in the land by other means”.¹⁴

Unfortunately, these absolute statements regarding the integrity of the various title registries are not justified. The register is less than perfect and “overriding” interests exist which are not disclosed on the supposedly conclusive register but which still bind the proprietor or owner of the land¹⁵ and may also bind those wishing to deal with that proprietor. Examples of these interests include unpaid municipal rates, charges and taxes, public rights of way, easements and the rights of a tenant in occupation. How are people able to ascertain such interests that are not recorded? Why does a registered title system, designed to be complete in itself, permit such off-register interests?

Somewhere during the past 150 years the fundamental principle of a complete and comprehensive register, the ideal espoused by the originators of land title registration, was lost. Why? Certainly the Parliaments responsible for passing the various land title registration statutes have participated by enacting express provisions providing for exceptions to the fundamental principle.¹⁶ In addition, the courts, when interpreting these statutes, have held that they contain implied exceptions to the fundamental principle of a comprehensive and conclusive register.¹⁷

Some commentators have noted with regret that the courts have mistakenly imported traditional general land law principles into the title registration statutes.¹⁸ Another has complained that the unwarranted importation of these principles has created uncertainty and complexity in a system designed to provide predictability and simplicity and which is still capable of doing so if only the courts would give a fair reading to the words of the statutes and not insist on subjecting the statutes to general law principles.¹⁹ These very issues are among those sought to be addressed by harmonising.

MALCOLM PARK is Research Fellow in The Centre for Spatial Data Infrastructures & Land Administration, Department of Geomatics, University of Melbourne.

Mail to: mmpark@unimelb.edu.au.

A qualified civil engineer, Dr Park changed careers as a consequence of his mum informing all and sundry (including total strangers) that her son was 'the least civil person' she knew. After studying law and practising as a barrister for two decades he suffered a late mid-life crisis but was unable to afford the usual red sports car or to induce any bodacious blonde young thing to run away with him. Rejected and dejected, he allowed himself to be sucked into undertaking a PhD research degree in the Department of Geomatics involving the cross disciplines of land law and the public administration of the land title registry with particular regard to the resolution of land parcel boundary location discrepancies. The hard bound copy of his PhD thesis was deposited in the Baillieu Library in 2003 [Call No: UniM Baill T] with an AUS \$50 note inserted between pages 176 and 177. As of the last checking (1 April, 2009), the \$50 note remained undisturbed.

His thesis, *The effect of adverse possession on part of a registered title land parcel* (2003), is available at:
