SITE NAME ABBREVIATIONS

I present site names below in their most common transliterated form and with their definite articles (al, el, er, es, et, ez) removed; for example, Tell es-Sa'idiyeh is Sa'idiyeh. When a site is commonly referred to by both modern and ancient names, I only refer to it by its accepted ancient name; for example, Tell es-Safi/Gath is Gath. The term tell, which denotes a mound marking the location of an ancient site, is also spelled tel or tall. The term khirbet or khirbat denotes a ruin on a hill or mound, and deir refers to a monastery. I have removed these identifiers in order to standardise site names within the text.²

APPENDIX D: ANALYSIS OF SIMILARITY BETWEEN REGIONS

In this appendix, I present the procedure and data for producing the 12 ‘dissimilarity matrices’ presented as Figures 27–32 and 34–39 in section 4.5 of Volume 1. This appendix is divided into two sections: (1) Procedure, and (2) Data.

PROCEDURE

Phase 1 – Comparing types across each pair of regions

In this section, I give the procedure for producing the six ‘dissimilarity matrices’ presented as Figures 26–31 in Section 4.5.1 of Volume 1.

Part 1.A: Comparing presence/absence of types across each pair of regions

Step 1.A.1: Begin with Table D.1a (Observations of types). Excluding the totals in the bottom row and rightmost column, replace all positive values with “1”.

The result is Table D.1b (Presence/absence of types).

Step 1.A.2: Using Table D.1b, score each type as present or absent in each of the 10 possible pairs of regions (1 = present in both regions; 0 = absent in either or both regions).

The result is Table D.2 (Similarity scores for pairs of regions based on Table D.1b). The totals in the bottom row of this table are the values presented in the ‘similarity scores’ matrix in Table D.16a.

Part 1.B: Comparing observations of types across each pair of regions

Step 1.B.1: Return to Table D.1a (Observations of types). In the bottom row, notice that the total number of observations in each of the five regions varies quite widely. For the numbers in this table to be statistically comparable, they must be *weighted* to compensate for this variation.

To weight the values in Table D.1a: excluding the totals in the bottom row and rightmost column, replace each value with a weighted value (w), calculated as follows:

$$w = (a / b) * c$$

...where:

a = the value in Table D.1a;

b = the total of the column containing a (as given in the bottom row of Table D.1a); and

c = the overall total in the lower right corner of Table D.1a (2302) divided by the number of regions (5): $2302/5 = 460.4$.

At the end of this process, total the rows and columns. The result is Table D.3 (Weighted observations of types). This table shows how many observations of each jewellery type there would be in each region, if the observations in Table D.1a were spread evenly between all five regions.

Step 1.B.2: Using Table D.3: excluding the totals in the bottom row and rightmost column, convert each value to a percentage (p) of its row-total, calculated as follows:

$$p = (a * 100) / b$$

...where:

a = the value in Table D.3; and

b = the total of the row containing a (as given in the rightmost column of Table D.3).

The result is Table D.4 (Weighted observations of types: Distribution of types between regions). This table shows (in percentages) how observations of each type are distributed between regions. Notice that each row now adds up to 100.0(%).

Step 1.B.3: Using Table D.4, calculate a 'similarity score' (s) for each type in each of the 10 possible pairs of regions, as follows:

$$s = 100 - |a - b|$$

...where:

a and b = the percentages of weighted observations of the type in two regions (as given in Table D.4); and

$|a - b|$ = the absolute value of the difference between these two percentages.

Exception: If a type is absent from both regions – that is, if a and b are both 0 – leave the cell *blank* rather than calculating a 'similarity score'. This aim of this exception is to avoid scoring any pair of regions as high in similarity based solely

on the shared *absence* of a jewellery type, as this would amount to an argument from silence.

The result is Table D.5 (Similarity scores for pairs of regions based on Table D.4).

The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.16b.

Part 1.C: Comparing observations of type assemblages across each pair of regions

Step 1.C.1: Return to Table D.3 (Weighted observations of types). For each category, add a row containing the totals for each *assemblage* (defined as 'one category in one region' – for example, 'earrings in the Aegean'.)

The result is Table D.6 (Weighted observations of types, with totals for assemblages).

Step 1.C.2: Using Table D.6: convert each value to a percentage (p) of its assemblage-total, calculated as follows:

$$p = (a * 100) / b$$

...where:

a = the value in Table D.6; and

b = the total of the *assemblage* containing a (as given in Table D.6).

The result is Table D.7 (Weighted observations of types: Distribution of assemblages between types). This table shows (in percentages) how observations of each assemblage are distributed between types. Notice that each assemblage now adds up to 100.0(%).

Step 1.C.3: Repeat Step 1.B.3, using Table D.7 in place of Table D.4.

The result is Table D.8 (Similarity scores for pairs of regions based on Table D.7).

The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.16d.

Part 1.D: Comparing units of types across each pair of regions

Step 1.D.1: Repeat Step 1.B.1, using Table D.9 (Units of types) in place of Table D.1a.

The result is Table D.10 (Weighted units of types).

Step 1.D.2: Repeat Step 1.B.2, using Table D.10 in place of Table D.3.

The result is Table D.11 (Weighted units of types: Distribution of types between regions).

Step 1.D.3: Repeat Step 1.B.3, using Table D.11 in place of Table D.4.

The result is Table D.12 (Similarity scores for pairs of regions based on Table D.11). The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.16c.

Part 1.E: Comparing units of type assemblages across each pair of regions

Step 1.E.1: Repeat Step 1.C.1, using Table D.10 in place of Table D.3.

The result is Table D.13 (Weighted units of types, with totals for assemblages).

Step 1.E.2: Repeat Step 1.C.2, using Table D.13 in place of Table D.6.

The result is Table D.14 (Weighted units of types: Distribution of assemblages between types).

Step 1.E.3: Repeat Step 1.B.3, using Table D.14 in place of Table D.4.

The result is Table D.15 (Similarity scores for pairs of regions based on Table D.14). The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.16e.

Part 1.F: Preparing similarity scores for comparison

Step 1.F.1: Parts 1.A–E of this procedure have resulted in five sets of similarity scores, as shown in Tables D.16a–e (Jewellery types: Similarity scores for each pair of regions).

Convert these similarity scores into dissimilarity scores, as follows: in each of the five tables (D.6a–e), divide the maximum score (shaded green) by each score.

The result is Tables D.17a–e (Jewellery types: Dissimilarity scores for each pair of regions). In each of these tables, the most similar pair of regions now has a score of 1.00.

Step 1.F.2: Scale the dissimilarity scores from 1 to 10 to make them comparable. Beginning with Table D.17a, convert each score to a scaled score (*s*), calculated as follows:

$$s = \frac{(a - 1) \times 9}{b - 1} + 1$$

...where:

a = the score in Table D.17a; and

b = the maximum score in Table D.17a (shaded green).

Repeat this process for Tables D.17b–e. The result is Tables D.18a–e (Jewellery types: Dissimilarity scores for each pair of regions, scaled from 1 to 10). In each of these tables, the most similar pair of regions retains a score of 1.00, while the least similar pair now has a score of 10.00.

Tables D.18a–e are presented as ‘Matrices 1–5’ [Figures 26–30] in Section 4.5.1 of Volume 1.

Step 1.F.3: Using Tables D.18a–e, average the five values for each pair of regions.

The result is Table D.18f, which represents an overall result for Phase 1. This table is presented as ‘Matrix 6’ [Figure 31] in Section 4.5.1 of Volume 1.

Phase 2 – Comparing subgroups across each pair of regions

In this section, I give the procedure for producing the six ‘dissimilarity matrices’ presented in Figures 33–38 in Section 4.5.2 of Volume 1.

Part 2.A: Comparing presence/absence of subgroups across each pair of regions

Step 2.A.1: Repeat Step 1.A.1, using Table D.19a (Observations of subgroups) in place of Table D.1a.

The result is Table D.19b (Presence/absence of subgroups).

Step 2.A.2: Repeat Step 1.A.2, using Table D.19b in place of Table D.1b.

The result is Table D.20 (Similarity scores for pairs of regions based on Table D.19b). The totals in the bottom row of this table are the values presented in the ‘similarity scores’ matrix in Table D.34a.

Part 2.B: Comparing observations of subgroups across each pair of regions

Step 2.B.1: Repeat Step 1.B.1, using Table D.19a in place of Table D.1a.

The result is Table D.21 (Weighted observations of subgroups).

Step 2.B.2: Repeat Step 1.B.2, using Table D.21 in place of Table D.3.

The result is Table D.22 (Weighted observations of subgroups: Distribution of subgroups between regions).

Step 2.B.3: Repeat Step 1.B.3, using Table D.22 in place of Table D.4.

The result is Table D.23 (Similarity scores for pairs of regions based on Table D.22). The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.34b.

Part 2.C: Comparing observations of subgroup assemblages across each pair of regions

Step 2.C.1: Repeat Step 1.C.1, using Table D.21 in place of Table D.3.

The result is Table D.24 (Weighted observations of subgroups, with totals for assemblages).

Step 2.C.2: Repeat Step 1.C.2, using Table D.24 in place of Table D.6.

The result is Table D.25 (Weighted observations of subgroups: Distribution of assemblages between subgroups).

Step 2.C.3: Repeat Step 1.B.3, using Table D.25 in place of Table D.4.

The result is Table D.26 (Similarity scores for pairs of regions based on Table D.25). The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.34d.

Part 2.D: Comparing units of subgroups across each pair of regions

Step 2.D.1: Repeat Step 1.B.1, using Table D.27 (Units of subgroups) in place of Table D.1a.

The result is Table D.28 (Weighted units of subgroups).

Step 2.D.2: Repeat Step 1.B.2, using Table D.28 in place of Table D.3.

The result is Table D.29 (Weighted units of subgroups: Distribution of subgroups between regions).

Step 2.D.3: Repeat Step 1.B.3, using Table D.29 in place of Table D.4.

The result is Table D.30 (Similarity scores for pairs of regions based on Table D.29). The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.34c.

Part 2.E: Comparing units of subgroup assemblages across each pair of regions

Step 2.E.1: Repeat Step 1.C.1, using Table D.28 in place of Table D.3.

The result is Table D.31 (Weighted units of subgroups, with totals for assemblages).

Step 2.E.2: Repeat Step 1.C.2, using Table D.31 in place of Table D.6.

The result is Table D.32 (Weighted units of subgroups: Distribution of assemblages between subgroups).

Step 2.E.3: Repeat Step 1.B.3, using Table D.32 in place of Table D.4.

The result is Table D.33 (Similarity scores for pairs of regions based on Table D.32). The totals in the bottom row of this table are the values presented in the 'similarity scores' matrix in Table D.34e.

Part 2.F: Preparing similarity scores for comparison

Step 2.F.1: Parts 2.A–E of this procedure have resulted in five sets of similarity scores, as shown in Tables D.34a–e (Jewellery subgroups: Similarity scores for each pair of regions).

Repeat Step 1.F.1, using Tables D.34a–e in place of Tables D.16a–e.

The result is Tables D.35a–e (Jewellery subgroups: Dissimilarity scores for each pair of regions). In each of these tables, the most similar pair of regions now has a score of 1.00.

Step 2.F.2: Repeat Step 1.F.2, using Tables D.35a–e in place of Tables D.17a–e.

The result is Tables D.36a–e (Jewellery subgroups: Dissimilarity scores for each pair of regions, scaled from 1 to 10). In each of these tables, the most similar pair of regions retains a score of 1.00, while the least similar pair now has a score of 10.00.

Tables D.36a–e are presented as 'Matrices 7–11' [Figures 33–37] in Section 4.5.2 of Volume 1.

Step 2.F.3: Repeat Step 1.F.3, using Tables D.36a–e in place of Tables D.18a–e.

The result is Table D.36f, which represents an overall result for Phase 2. This table is presented as ‘Matrix 12’ [Figure 38] in Section 4.5.2 of Volume 1.
