Abstract

The Concise Guide to PHARMACOLOGY 2013/14 provides concise overviews of the key properties of over 2000 human drug targets with their pharmacology, plus links to an open access knowledgebase of drug targets and their ligands (www.guidetopharmacology.org), which provides more detailed views of target and ligand properties from the IUPHAR database. The full contents can be found at <http://onlinelibrary.wiley.com/doi/10.1111/bph.12444/full>.

This compilation of the major pharmacological targets is divided into seven areas of focus: G protein-coupled receptors, ligand-gated ion channels, ion channels, catalytic receptors, nuclear hormone receptors, transporters and enzymes. These are presented with nomenclature guidance and summary information on the best available pharmacological tools, alongside key references and suggestions for further reading. A new landscape format has easy to use tables comparing related targets.

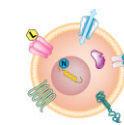

It is a condensed version of material contemporary to late 2013, which is presented in greater detail and constantly updated on the website www.guidetopharmacology.org, superseding data presented in previous Guides to Receptors & Channels. It is produced in conjunction with NC-IUPHAR and provides the official IUPHAR classification and nomenclature for human drug targets, where appropriate. It consolidates information previously curated and displayed separately in IUPHAR-DB and GRAC and provides a permanent, citable, point-in-time record that will survive database updates.

Table of contents

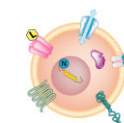

1449	OVERVIEW	1485	Apelin receptor	1505	Endothelin receptors
1454	Adiponectin receptors	1486	Bile acid receptor	1506	Estrogen (G protein-coupled) receptor
1455	Fatty acid binding proteins	1487	Bombesin receptors	1507	Formylpeptide receptors
1457	Sigma receptors	1488	Bradykinin receptors	1508	Free fatty acid receptors
1459	G PROTEIN-COUPLED RECEPTORS	1489	Calcitonin receptors	1510	Frizzled Class GPCRs
1462	Orphan GPCRs	1491	Calcium-sensing receptors	1511	GABA _B receptors
1471	5-Hydroxytryptamine receptors	1492	Cannabinoid receptors	1513	Galanin receptors
1474	Acetylcholine receptors (muscarinic)	1494	Chemerin receptor	1514	Ghrelin receptor
1476	Adenosine receptors	1495	Chemokine receptors	1515	Glucagon receptor family
1478	Adhesion Class GPCRs	1500	Cholecystokinin receptors	1517	Glycoprotein hormone receptors
1480	Adrenoceptors	1501	Complement peptide receptors	1518	Gonadotrophin-releasing hormone receptors
1484	Angiotensin receptors	1502	Corticotropin-releasing factor receptors	1519	GPR18, GPR55 and GPR119
		1503	Dopamine receptors	1520	Histamine receptors

Searchable database: <http://www.guidetopharmacology.org/index.jsp>

Full Contents of Concise Guide: <http://onlinelibrary.wiley.com/doi/10.1111/bph.12444/full>

1521 Hydroxycarboxylic acid receptors	1612 CatSper and Two-Pore channels	1717 SLC1 family of amino acid transporters
1522 Kisspeptin receptors	1613 Chloride channels	1719 SLC2 family of hexose and sugar alcohol transporters
1523 Leukotriene, lipoxin and oxoeicosanoid receptors	1620 Connexins and Pannexins	1721 SLC3 and SLC7 families of heteromeric amino acid transporters (HATs)
1525 Lysophospholipid (LPA) receptors	1621 Cyclic nucleotide-regulated channels	1723 SLC4 family of bicarbonate transporters
1526 Lysophospholipid (S1P) receptors	1623 Epithelial sodium channels (ENaC)	1724 SLC5 family of sodium-dependent glucose transporters
1527 Melanin-concentrating hormone receptors	1625 IP ₃ receptor	1728 SLC6 neurotransmitter transporter family
1528 Melanocortin receptors	1626 Potassium channels	1732 SLC8 family of sodium/calcium exchangers
1529 Melatonin receptors	1630 Ryanodine receptor	1733 SLC9 family of sodium/hydrogen exchangers
1530 Metabotropic glutamate receptors	1632 Sodium leak channel, non-selective	1734 SLC10 family of sodium-bile acid co-transporters
1532 Motilin receptor	1633 Transient receptor potential channels	1736 SLC11 family of proton-coupled metal ion transporters
1533 Neuromedin U receptors	1643 Voltage-gated calcium channels	1737 SLC12 family of cation-coupled chloride transporters
1534 Neuropeptide FF/neuropeptide AF receptors	1645 Voltage-gated proton channel	1739 SLC13 family of sodium-dependent sulphate/carboxylate transporters
1535 Neuropeptide S receptor	1646 Voltage-gated sodium channels	1740 SLC14 family of facilitative urea transporters
1536 Neuropeptide W/neuropeptide B receptors		1741 SLC15 family of peptide transporters
1537 Neuropeptide Y receptors	1652 NUCLEAR HORMONE RECEPTORS	1742 SLC16 family of monocarboxylate transporters
1538 Neurotensin receptors	1654 1A. Thyroid Hormone Receptors	1744 SLC17 phosphate and organic anion transporter family
1539 Opioid receptors	1655 1B. Retinoic acid receptors	1746 SLC18 family of vesicular amine transporters
1541 Orexin receptors	1656 1C. Peroxisome proliferator-activated receptors	1748 SLC19 family of vitamin transporters
1542 Oxoglutarate receptor	1657 1D. Rev-Erb receptors	1749 SLC20 family of sodium-dependent phosphate transporters
1543 P2Y receptors	1658 1F. Retinoic acid-related orphans	1750 SLC22 family of organic cation and anion transporters
1545 Parathyroid hormone receptors	1659 1H. Liver X receptor-like receptors	1753 SLC23 family of ascorbic acid transporters
1546 Peptide P518 receptor	1660 1I. Vitamin D receptor-like receptors	1754 SLC24 family of sodium/potassium/calcium exchangers
1547 Platelet-activating factor receptor	1661 2A. Hepatocyte nuclear factor-4 receptors	1755 SLC25 family of mitochondrial transporters
1548 Prokineticin receptors	1662 2B. Retinoid X receptors	1760 SLC26 family of anion exchangers
1549 Prolactin-releasing peptide receptor	1663 2C. Testicular receptors	1762 SLC27 family of fatty acid transporters
1550 Prostanoid receptors	1664 2E. Tailless-like receptors	1763 SLC28 and SLC29 families of nucleoside transporters
1552 Proteinase-activated receptors	1665 2F. COUP-TF-like receptors	1765 SLC30 zinc transporter family
1553 Relaxin family peptide receptors	1666 3B. Estrogen-related receptors	1766 SLC31 family of copper transporters
1555 Somatostatin receptors	1667 4A. Nerve growth factor 1B-like receptors	1767 SLC32 vesicular inhibitory amino acid transporter
1556 Succinate receptor	1668 5A. Fushi tarazu F1-like receptors	1768 SLC33 acetylCoA transporter
1557 Tachykinin receptors	1669 6A. Germ cell nuclear factor receptors	1769 SLC34 family of sodium phosphate co-transporters
1558 Thyrotropin-releasing hormone receptors	1670 0B. DAX-like receptors	1770 SLC35 family of nucleotide sugar transporters
1559 Trace amine receptor	1671 Steroid hormone receptors	1772 SLC36 family of proton-coupled amino acid transporters
1560 Urotensin receptor		1773 SLC37 family of phosphosugar/phosphate exchangers
1561 Vasopressin and oxytocin receptors	1676 CATALYTIC RECEPTORS	1774 SLC38 family of sodium-dependent neutral amino acid transporters
1562 VIP and PACAP receptors	1678 Cytokine receptor family	1776 SLC39 family of metal ion transporters
	1684 GDNF receptor family	1777 SLC40 iron transporter
1582 LIGAND-GATED ION CHANNELS	1685 Integrins	1778 SLC41 family of divalent cation transporters
1584 5-HT ₃ receptors	1688 Natriuretic peptide receptor family	1779 SLC42 family of Rhesus glycoprotein ammonium transporters
1586 GABA _A receptors	1689 Pattern Recognition receptors	1780 SLC43 family of large neutral amino acid transporters
1590 Glycine receptors	1692 Receptor serine/threonine kinase (RSTK) family	1781 SLC44 choline transporter-like family
1592 Ionotropic glutamate receptors	1695 Receptor tyrosine kinases	1782 SLC45 family of putative sugar transporters
1597 Nicotinic acetylcholine receptors	1702 Receptor tyrosine phosphatases (RTP)	1783 SLC46 family of folate transporters
1601 P2X receptors	1703 Tumour necrosis factor (TNF) receptor family	
1603 ZAC		
	1706 TRANSPORTERS	
1607 ION CHANNELS	1708 ATP-binding cassette transporter family	
1609 Acid-sensing (proton-gated) ion channels (ASICs)	1712 F-type and V-type ATPases	
1611 Aquaporins	1714 P-type ATPases	

1784	SLC47 family of multidrug and toxin extrusion transporters	1800	Adenosine turnover	1832	Glycerophospholipid turnover
1785	SLC48 heme transporter	1801	Amino acid hydroxylases	1838	Haem oxygenase
1786	SLC49 family of FLVCR-related heme transporters	1802	L-Arginine turnover	1839	Hydrogen sulfide synthesis
1787	SLC50 sugar transporter	1805	Carboxylases and decarboxylases	1840	Inositol phosphate turnover
1788	SLC51 family of steroid-derived molecule transporters	1807	Catecholamine turnover	1842	Lanosterol biosynthesis pathway
1789	SLC52 family of riboflavin transporters	1810	Ceramide turnover	1845	Peptidases and proteinases
1790	SLCO family of organic anion transporting polypeptides	1815	Cyclic nucleotide turnover	1853	Protein serine/threonine kinases
		1820	Cytochrome P450	1860	Sphingosine 1-phosphate turnover
1797	ENZYMES	1824	Eicosanoid turnover	1862	Thyroid hormone turnover
1799	Acetylcholine turnover	1828	Endocannabinoid turnover		
		1830	GABA turnover		

An Introduction to the Concise Guide to PHARMACOLOGY 2013/14

The great proliferation of drug targets in recent years has driven the need to provide a logically-organised synopsis of the nomenclature and pharmacology of these targets. This is the underlying reason for this Guide to PHARMACOLOGY 2013/14, distributed with the *British Journal of Pharmacology*, and produced in association with NC-IUPHAR, the Nomenclature Committees of the International Union of Basic and Clinical Pharmacology. Our intent is to produce an authoritative but user-friendly publication, which allows a rapid overview of the key properties of a wide range of established or potential pharmacological targets. The aim is to provide information succinctly, so that a newcomer to a particular target group can identify the main elements 'at a glance'. It is not our goal to produce all-inclusive reviews of the targets presented; references to these are included in the Further Reading sections of the entries or, for many targets, the website www.guidetopharmacology.org provides access to more extensive information. The Guide to PHARMACOLOGY 2013/14 presents each entry, typically a circumscribed target class family on, wherever possible, a single page, so as to allow easy access and rapid oversight.

The list of targets present is, in many cases, a comprehensive reflection of the known targets within the particular group. Our philosophy has been to present data on human proteins wherever possible, both in terms of structural information and pharmacology. To this end, the HGNC gene nomenclature and UniProt unique ID are indicated to allow rapid access through free online databases for further information. In a few cases, where structural or pharmacological information is not available for human targets, we have used data from other species, as indicated. A priority in constructing these tables was to present agents which represent the most selective and which are available by donation or from commercial sources, now or in the near future.

The Guide is divided into seven further sections, which comprise pharmacological targets of similar structure/function. These are G protein-coupled receptors, ligand-gated ion channels, ion channels, catalytic receptors, nuclear hormone receptors, transporters and enzymes. In this overview are listed protein targets of pharmacological interest, which are not G protein-coupled receptors, ligand-gated ion channels, ion channels, nuclear

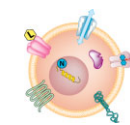

hormone receptors, catalytic receptors, transporters or enzymes. In comparison with the Fifth Edition of the Guide to Receptors & Channels [1], we have added a number of new records, expanding the total to include over 2000 protein targets, primarily from increasing the content on transporters and enzymes.

The Editors of the Guide have compiled the individual records, taking advice from many Collaborators (listed on page 1452). Where appropriate, an indication is given of the status of the nomenclature, as proposed by NC-IUPHAR, published in *Pharmacological Reviews*. Where this guidance is lacking, advice from several prominent, independent experts has generally been obtained to produce an authoritative consensus, which attempts to fit in within the general guidelines from NC-IUPHAR [2]. Tabulated data provide ready comparison of selective agents and probes (radioligands and PET ligands, where available) within a family of targets and additional commentary highlights whether species differences or ligand metabolism are potential confounding factors. We recommend that any citations to information in the Concise Guide are presented in the following format:

Conflict of interest

The authors state that there are no conflicts of interest to disclose.

List of records presented

- 1454 Adiponectin receptors
- 1455 Fatty acid binding proteins
- 1457 Sigma receptors

Adiponectin receptors

Overview: Adiponectin receptors (provisional nomenclature, ENSFM00500000270960) respond to the 30 kDa complement-related protein hormone adiponectin (also known as *ADIPOQ*: adipocyte, C1q and collagen domain-containing protein; ACRP30, adipose most abundant gene transcript 1; apM-1; gelatin-binding protein: Q15848) originally cloned from adipocytes [4]. Although sequence data suggest 7TM domains,

immunological evidence indicates that, contrary to typical 7TM topology, the carboxyl terminus is extracellular, while the amino terminus is intracellular [6]. Signalling through these receptors appears to avoid G proteins. Adiponectin receptors appear rather to stimulate protein phosphorylation via AMP-activated protein kinase and MAP kinase pathways [6], possibly through the protein partner *APPL1* (adaptor protein, phosphotyrosine

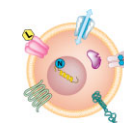

interaction, PH domain and leucine zipper containing 1, Q9UKG1 [5]). The adiponectin receptors are a class of proteins (along with membrane progesterin receptors), which contain seven sequences of aliphatic amino acids reminiscent of GPCRs, but which are structurally and functionally distinct from that class of receptor.

Nomenclature	Adipo1 receptor	Adipo2 receptor
HGNC, UniProt	<i>ADIPOR1</i> , Q96A54	<i>ADIPOR2</i> , Q86V24
Rank order of potency	globular adiponectin > adiponectin	globular adiponectin = adiponectin

Comments: T-Cadherin (*CDH13*, P55290) has also been suggested to be a receptor for (hexameric) adiponectin [3].

Fatty acid binding proteins

Overview: Fatty acid-binding proteins are low molecular weight (100–130 aa) chaperones for long chain fatty acids, fatty acyl CoA esters, eicosanoids, retinols, retinoic acids and related metabolites and are usually regarded as being responsible for

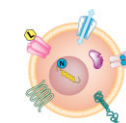

allowing the otherwise hydrophobic ligands to be mobile in aqueous media. These binding proteins may perform functions extracellularly (*e.g.* in plasma) or transport these agents; to the nucleus to interact with nuclear receptors (principally PPARs and

retinoic acid receptors [16]) or for interaction with metabolic enzymes. Although sequence homology is limited, crystallographic studies suggest conserved 3D structures across the group of binding proteins.

Preferred abbreviation	FABP1	FABP2	FABP3	FABP4	FABP5
Nomenclature	fatty acid binding protein 1, liver	fatty acid binding protein 2, intestinal	fatty acid binding protein 3, muscle and heart (mammary-derived growth inhibitor)	fatty acid binding protein 4, adipocyte	fatty acid binding protein 5 (psoriasis-associated)
HGNC, UniProt	<i>FABP1</i> , P07148	<i>FABP2</i> , P12104	<i>FABP3</i> , P05413	<i>FABP4</i> , P15090	<i>FABP5</i> , Q01469
Rank order of potency	stearic acid, oleic acid > palmitic acid, linoleic acid > arachidonic acid, α -linolenic acid [13]	stearic acid > palmitic acid, oleic acid > linoleic acid > arachidonic acid, α -linolenic acid [13]	stearic acid, oleic acid, palmitic acid > linoleic acid, α -linolenic acid, arachidonic acid [13]	oleic acid, palmitic acid, stearic acid, linoleic acid > α -linolenic acid, arachidonic acid [13]	–

Comment	Able to transport bile acids [20]	Crystal structure of the human FABP7 [7]	<i>In silico</i> modelling suggests that FABP8 can bind both fatty acids and cholesterol [12]	–	–

Preferred abbreviation	RBP1	RBP2	RBP3	RBP4	RBP5
Nomenclature	retinol binding protein 1, cellular	retinol binding protein 2, cellular	retinol binding protein 3, interstitial	retinol binding protein 4, plasma	retinol binding protein 5, cellular
HGNC, UniProt	<i>RBP1</i> , P09455	<i>RBP2</i> , P50120	<i>RBP3</i> , P10745	<i>RBP4</i> , P02753	<i>RBP5</i> , P82980
Rank order of potency	–	stearic acid > palmitic acid, oleic acid, linoleic acid, α -linolenic acid, arachidonic acid [14]	–	–	–

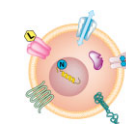

Preferred abbreviation	RBP7	RLBP1	CRABP1	CRABP2
Nomenclature	retinol binding protein 7, cellular	retinaldehyde binding protein 1	cellular retinoic acid binding protein 1	cellular retinoic acid binding protein 2
HGNC, UniProt	<i>RBP7</i> , Q96R05	<i>RLBP1</i> , P12271	<i>CRABP1</i> , P29762	<i>CRABP2</i> , P29373
Rank order of potency	–	11- <i>cis</i> -retinal, 11- <i>cis</i> -retinol > 9- <i>cis</i> -retinal, 13- <i>cis</i> -retinal, 13- <i>cis</i> -retinol, all- <i>trans</i> -retinal, retinol [8]	all- <i>trans</i> -retinoic acid > 9- <i>cis</i> -retinoic acid stearic acid > palmitic acid, oleic acid, linoleic acid, α -linolenic acid, arachidonic acid [14]	–

Comments: Although not tested at all FABPs, BMS309403 exhibits high affinity for FABP4 (pIC_{50} ~8.8) compared to FABP3 or FABP5 (pIC_{50} <6.6, [9,17]). HTS01037 is reported to interfere with FABP4 action [10]. Multiple pseudogenes for the FABPs have been identified in the human genome.

Sigma receptors

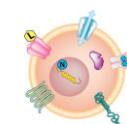

Overview: Although termed ‘receptors’, the evidence for coupling through conventional signalling pathways is lacking. Initially described as a subtype of opioid receptors, there is only a modest pharmacological overlap and no structural convergence with the G protein-coupled receptors. A wide range of compounds, ranging from psychoactive agents to antihistamines, have been observed to bind to these sites, which appear to be intracellular.

Nomenclature	σ 1 (sigma non-opioid intracellular receptor 1)	σ 2
HGNC, UniProt	<i>SIGMAR1</i> , Q99720	–
Selective agonists	(+)-SK&F10047, (RS)-PPCC (p <i>K</i> _i 8.8) [25], PRE-084 (p <i>C</i> ₅₀ 7.4) [26]	PB-28 (p <i>K</i> _i 8.3) [21]
Selective antagonists	NE-100 (p <i>C</i> ₅₀ 8.4) [24], BD-1047 (p <i>C</i> ₅₀ 7.4) [23]	(RS)-SM21 (p <i>C</i> ₅₀ 7.2) [22]
Radioligands (<i>K</i> _d)	[³ H]-pentazocine (Agonist)	[³ H]-di-o-tolylguanidine (Agonist)

Comments: (-)-pentazocine also shows activity at opioid receptors. There is no molecular correlate of the sigma2 receptor.
